

## Daniel Grammatica

t. 07474 708 718 e. [dan@t0xic.me](mailto:dan@t0xic.me)

I was excited when I saw you had a job opening in what looks like such a fostering environment. I would love a job that's challenging and caters for my inner-geek. I feel I have a lot to offer your team and always strive to further my knowledge and see a job to perfected completion. If it involves a computer, I believe nothing is impossible and love proving people otherwise. Where I can I will always use an Open Source solution, primarily because of the community but secondly because of security. Following Snowden's enlightening leaks, I switched from OSX to Ubuntu as a primary work machine and never looked back. I may not be a security professional myself but I like that that Open Source software can and is reviewed by professionals, I feel (fairly) safe from spying eyes.

With five years IT Support experience in a wide and varied environment, I have grown my troubleshooting and inter-personal skills as a result. I find the IT sector exciting and strive to keep up to date on new technologies. Having worked in the Education sector previously, I would like to help Raspberry Pi to educate, foster and inspire people to join the Hacker culture.

I would love to discuss your position further, if you would give me the opportunity of an interview. Please take a look at my online CV (<http://t0xic.me/cv>). PDF also attached.
